

## **AMENDMENTS TO THE CLAIMS**

The following listing of claims will replace all prior versions and listings of claims in the application.

### **LISTING OF CLAIMS**

1. (Previously presented) A display device substrate comprising:  
a plurality of display electrodes;  
a plurality of wirings for applying the plurality of display electrodes with a voltage;  
the plurality of wirings including a laminated structure composed of a transparent conductive layer formed of the same layer as that of the display electrodes, and a metal layer having an electrical resistance lower than that of the transparent conductive layer;  
the display electrodes including the laminated structure of the transparent conductive layer and the metal layer; and  
a reflective display function using the region of the metal layer as a light reflective section.
2. (Previously presented) The display device substrate according to Claim 1, wherein the display electrode comprises a laminated structure composed of a transparent conductive layer, and a metal layer having an electrical resistance lower than that of the transparent conductive layer.
3. (Original) The display device substrate according to Claim 2, wherein the metal layer in the display electrode is narrower in width than the transparent conductive layer.

4. (Previously Presented) The display device substrate according to claim 1, wherein the metal layer of the display electrodes has an aperture in the laminated structure, and further includes a transmissive display function using the aperture of the metal layer as a light transmissive section.

5. (Original) The display device substrate according to Claim 1, wherein the wirings are routed from the ends of the respective display electrodes along the peripheral portion of the display device substrate.

6. (Original) A liquid-crystal device encapsulating a liquid crystal between a pair of substrates, the device comprising the display device substrate according to Claim 1, as to at least one of the pair of substrates.

7. (Previously presented) A liquid-crystal device comprising the display device substrate according to Claim 4; a counter substrate opposed to the display device substrate; and a liquid-crystal layer encapsulated between the display device substrate and the counter substrate.

8. (Original) Electronic equipment comprising:  
the liquid-crystal device according to Claim 7, as display means.

9. – 12. (Cancelled)

13. (Previously presented) A liquid-crystal device comprising:

- a pair of display device substrates;
- a liquid crystal encapsulated between the display device substrates;
- one of the pair of display device substrates including a plurality of pixel electrodes, and a plurality of two-terminal-type switching elements, each connected to the respective pixel electrode;
- the other of the pair of display device substrates including a plurality of display electrodes arranged in stripes to be opposed to the plurality of pixel electrodes, and wirings respectively connected to the display electrodes,
- the plurality of display electrodes including a transparent conductive layer;
- the wirings including a transparent conductive layer formed of the same layer as that of the display electrodes, and a metal layer having an electrical resistance lower than that of the transparent conductive layer;
- the display electrodes including the laminated structure of the transparent conductive layer and the metal layer; and
- a reflective display function using the region of the metal layer as a light reflective section.

14. (Previously presented) A liquid-crystal device comprising:

- a pair of display device substrates;
- a liquid crystal encapsulated between the display device substrates;
- one of the pair of display device substrates including a plurality of pixel electrodes, and a plurality of three-terminal-type switching elements, each connected to the respective pixel electrode; and
- the other of the pair of display device substrates including a plurality of display electrodes arranged in stripes to be opposed to the plurality of pixel electrodes, and wirings respectively connected to the display electrodes,
- the plurality of display electrodes including a transparent conductive layer;
- the wirings including a transparent conductive layer formed of the same layer as that of the display electrodes, and a metal layer having an electrical resistance lower than that of the transparent conductive layer;
- the display electrodes including the laminated structure of the transparent conductive layer and the metal layer; and
- a reflective display function using the region of the metal layer as a light reflective section.

15. – 38. (Cancelled)
